

## “Gypsy”

Gypsy is a chocolate leopard Catahoula that was surrendered to our department in November 2019. The canine was thin, had severe skin issues, missing hair and open and bleeding sores covering her entire body. Her ears were thickened, and her feet were red, swollen and inflamed. Gypsy was taken to the vet and after several biopsies, she was diagnosed with an auto-immune disease called Pemphigus Foliaceus. Today, Gypsy’s skin has cleared up and she was adopted into a loving home.

Photo taken 12/17 after 3 weeks of medication

Case #: 19-44219

Treatment: Exam, Biopsies, and medications

Cost: \$500.00

Outcome: Adopted

## “Rumford”

In November 2019, our department received a call in regards to a stray Bloodhound that was thin with a foot injury, which the complainant described as his “toes falling off”. The dog, who came to be known as Rumford, had to have his right rear leg amputated due to a tumor. Rumford has since been adopted into a loving home.

Case #: 19-44132

Treatment: rear leg amputation, pain medication, and antibiotics

Cost: \$1,000

Outcome: Adopted

## “Susie Q”

Susie Q, an elderly Chihuahua mix, was found in poor condition in Punta Gorda. She was examined by a veterinarian and found to have cataracts, fleas, hookworms, and Demodex Mange. Her jaw was also broken on both sides, which caused it to just hang. It was determined to be an old fracture that was never addressed. The little teeth she did have were rotten and loose.

Case #19-43886

Treatment: Jaw surgery, extraction of all her remaining teeth, and medications

Cost: \$727.65

Outcome:
