# **Supplemental Specifications for Decorative Lighting Systems**

**October 2014**

7000 Florida Street  
Punta Gorda, Florida 33950  
Phone: 941.575.3600  
Fax: 941.575.3664

**PURPOSE:**

All work associated with the design and installation of a decorative lighting system(s) shall conform to current Florida Department of Transportation (FDOT) Design Standards, FDOT Plans Preparation Manual, Standard Specifications for Road and Bridge Construction, AASHTO Roadway Lighting Design Guide, the most current edition of the Manual on Uniform Traffic Control Devices (MUTCD), the National Electrical Code (NEC) and/or the National Electric Safety Code (NESC), and this supplement. If a contradiction in code arises between the NEC and the NESC, the NESC shall be the governing document. It is the intent of this supplement to detail installation requirements, dictated by the County, which exceed FDOT standards and NEC requirements. It is the contractor's responsibility to note these extended specifications and to adhere to the methods and requirements mandated in this document.

**WORKMANSHIP:**

All work is to be performed in a workmanlike manner, and all OSHA and safety procedures shall be strictly followed and adhered to. It is the contractor's responsibility to provide the labor, skilled in the appropriate areas, necessary to provide an acceptable and professional finished product. The contractor and his personnel shall have, at all times, all the necessary paperwork for completion of the job. It is expected that plumb surfaces shall be plumb. Spacing of multiple components, such as conduit stubs or straps, shall be in equal increments. All materials shall be new.

All light pole assemblies and the electrical service pole shall be leveled to the satisfaction of the Lighting District inspector.

The Charlotte County Lighting District inspector assigned to the project shall have the authority to make final determinations on whether workmanship, materials, and/or the final project(s) meet the specifications contained herein.

Charlotte County reserves the right to redirect the termination point(s) of any or all conduit(s) from what is shown on the plans. If the quantity of materials is increased, the Contractor shall be compensated according to the per unit price of this change.

Charlotte County reserves the right to add to or delete from the overall quantity of pull boxes from what is shown on the plans. If the quantity of materials is increased, the Contractor shall be compensated according to the per unit price of this change.

**QUALIFICATION OF SIGNAL CONTRACTOR PERSONNEL:**

The contractor, engaged in installing decorative lighting systems within Charlotte County, shall have all work performed under the supervision of a technician certified by the International Municipal Signal Association (I.M.S.A.) as a Level I, Roadway Lighting Technician or as a Level I Traffic Signal Technician Construction and or Field. This Technician shall be present on-site during any decorative lighting installation activities. The technician's certification shall be presented at the preconstruction conference or upon request.

During all working hours, the Contractor shall have a responsible, English-speaking Superintendent on the project with the capabilities and authority required by FDOT Specifications, Section 5-8.

Employees shall be trained in and familiar with the safety related work practices, safety procedures, and other safety requirements that pertain to their respective job assignments per OSHA Standard 1910 – Electrical and Federal Register 29 CFR Part 1926 Cranes and Derricks in Construction; Final Rule. Employees shall also be trained in and familiar with any other safety practices, including applicable emergency procedures that are not specifically addressed, but are related to their work and are necessary for their safety.

#### **RESPONSIBILITY OF SIGNAL CONTRACTOR PERSONNEL:**

Charlotte County Lighting District Inspection staff shall be notified in writing either via form letter (To: Charlotte County Lighting District, 7000 Florida St., Punta Gorda, FL 33950) or e-mail (LightingInspector@CharlotteCountyFL.gov) a minimum of 72 hours prior to the commencement of jobs that include overhead or underground work that will be conducted as part of construction or maintenance projects within the Charlotte County or State road right of way.

The Charlotte County Lighting District inspection staff shall be notified in writing either via form letter or e-mail (LightingInspector@CharlotteCountyFL.gov) a minimum of 24 hours prior to any and all daily work to be performed throughout the entire length of construction or maintenance projects. Any changes that necessitate the rescheduling of work that has been previously scheduled shall be provided in writing via e-mail no later than the morning that it was to be performed.

#### **GENERAL REQUIREMENTS:**

Designers of decorative lighting systems shall utilize voltages of 240 or 480 volts. The 480 volt, phase-to-ground voltage is distributed with one current-carrying conductor, one grounded conductor, and one grounding conductor.

Under no circumstances shall the neutral conductor be switched, fused, or broken in any manner.

The light type for all decorative lighting systems shall be high pressure sodium (HPS). There will be no substitutes to the wattages or light type. Designers shall utilize any combinations of 70, 100, 150, or 250 watt mogul base HPS lamps. The lamp style for 70, 100, and 150 watt bulbs shall be ED23.5 and ED18 for 250 watt lamps.

All conduits entering or exiting the load center cabinet shall use a Myers hub. Rigid conduits shall be secured to the service pole by means of a strut channel system. (i.e., Kindorf, GS Metals, B-Line, etc.).

No nails or small screws shall be used to mount cabinet, straps, etc., in place. All fastening devices shall be galvanized or stainless steel screws, sleeve anchors, or lag bolts, 5/16" x 2" or larger.

The contractor shall submit cut sheets on all materials proposed for installation of the roadway lighting system. The material submittal will be reviewed by the Charlotte County Lighting District for conformance.

The electrical load center cabinet shall be installed onto a 26' concrete service pole for overhead services or onto a 12' concrete pole for underground services. All lighting load centers are to be metered. The contractor shall furnish and install an oval eye bolt through the top of the 26' service pole for FPL to attach onto.

Each new lighting load center will utilize a Millsbank by-pass meter socket, part #U3505-XL-TG-HSP along with a 100 amp, Square D, non-fusible safety switch, part #HU363RB. The Square D, non-fusible safety switch is not required in 240 volt applications.

Each lighting branch circuit shall have its own conduit run. Installing two lighting circuits into one conduit will not be permitted. The Engineer of Record should make every effort possible to locate the roadway lighting load center in the middle of the circuits. Two circuits extending in one direction on the same side of the roadway will not be permitted. (I.E. - The only exception to this would be when the service point is supplying power to the adjacent side of the roadway for circuits 3 and 4.)

Each light pole shall have a pull box placed directly in front of or behind the light pole foundation.

All lighting circuits shall be designed to use only #6 AWG THHN/THWN stranded wire throughout the system. If the required circuits cannot be accomplished using #6 AWG, an additional contactor will be required.

### **CONCEALED WORK:**

Work performed, that will not be readily visible upon completion, shall not be concealed until a County Lighting inspector gives approval. In the event the items listed below are concealed, it will be the contractor's responsibility to expose the questioned item(s) for the inspector's approval, at no additional cost to the County. This includes, but is not limited to:

- Buried or imbedded conduit
- Ground wire, rods, and arrays
- All Meg ohm and continuity testing shall be done in the presence of the County inspector.

### **SURFACE TREATMENTS:**

The application of the following materials to various components shall be performed during assembly:

- Threaded Hardware - All non-electrical threaded hardware (i.e., all threaded pole hardware or any other threaded component which requires assembly) shall be coated with Ideal Noalox Anti-Oxidant Compound or County-approved equivalent. The amount of Noalox applied shall be sufficient to be visible.
- Electrical Connections - All mechanical electrical connections shall have the various components of the splice or termination coated with Ideal Noalox Anti-Oxidant Compound or County-approved equivalent.

**CONDUIT:**

All conduit and fittings shall be utilized for the purpose they were designed. There shall be no fabrications of non-standard sweeps by "cutting up" a standard sweep. Heat bending PVC conduit is acceptable. Conduits shall not be filled beyond the capacity stated in the National Electrical Code. PVC conduit stubs into the load center cabinet shall be plumb and evenly distributed. All PVC conduits shall be electrical grade, 2", Schedule 40 minimum. All PVC conduits shall be joined together with integral deep bell ends and special long line couplings.

The connection between the pull box and the street light base shall be by means of 1 ¼" liquid-tight flexible non-metallic (seal tight) conduit. Only one conduit should enter a light pole base.

All exposed, aboveground conduit shall be heavy-wall, galvanized, rigid conduit. All threaded, rigid conduit connections shall be coated with Ideal Noalox Anti-Oxidant Compound. The exposed, aboveground conduit shall be properly grounded at all locations within the lighting system.

All conduit ends inside a pull box shall be sufficiently notched to allow a PVC plumbing test cap to be fully installed onto the conduit. Notching of the conduit shall be done prior to the installation of any conductors. The conduits inside the pole base shall be sealed with duct seal putty.

All spare/un-occupied conduits shall have a #14 AWG, stranded XHHW tracer wire. All lighting conduits shall be placed between 30" and 36" deep. If conduits cannot be placed at a 30" minimum depth due to underground conflicts (i.e., rocks, roots, culvert pipes, etc.), the Contractor shall furnish and install 2" rigid conduit in those areas, and it shall be grounded per National Electric Code (NEC) Specifications.

**GROUNDING:**

The minimum size of all ground/bond wire will be #6 AWG stranded, green wire. The wire insulation shall be THHN/THWN. Bare wire will not be accepted inside conduit. The ground wire shall attach to the ground rod by means of a grounding acorn with a hex bolt. Multiple conductors shall not be joined together under a grounding acorn. One conductor shall be terminated under the acorn, and all others shall be joined with a split bolt. No heat fusion welding will be accepted.

All exposed, aboveground metal conduit shall be properly grounded with a ground bushing clamp or Myers hub.

All ground rods shall be sectional, 5/8" x 10', copper clad, bonded to a steel core. Forty (40) feet shall be installed at the load center and twenty (20) feet at all light pole locations.

#### **PULL BOXES:**

All pull boxes shall be traffic-rated (20K minimum), fiberglass-reinforced concrete, such as "Quazite-Composolite," Part #PG1324BA12 (box), and #PG1324HA\_\_ (lid). Dashes indicate lid logo. Pull boxes placed in front of the load center and on the opposite side of the service point road crossing shall be larger than the standard lighting pull box. Stacking of pull boxes will not be permitted. The box to be used at the load center and load center crossing shall be a Quazite part #PG173OBA12 (box) and #PG173OHA\_\_ (lid). The last two digits left blank are for the lid logo and shall be filled in by the contractor for the specific lid logo required. All pull boxes shall have cover logos identifying their specific purpose. The lid logo shall read "Street Lighting." The pull boxes shall have the FDOT APL number embossed in the cover, and the interior of the box shall be stenciled with the APL number.

Placement shall be in accordance with FDOT Design Standards; however, preference is to locate pull boxes in sidewalk areas if job conditions permit. All pull boxes not within the sidewalk areas shall have a concrete pad poured around them, per FDOT Design Standards Index 17500, Sheet 2 of 3.

Charlotte County reserves the right to add to or delete from the overall quantity of pull boxes from what is shown on the plans. If the quantity of materials is increased, the contractor shall be compensated according to the per unit price of this change.

#### **WIRE:**

All current-carrying conductors shall have continuous black or red THHN/THWN insulation, rated at 600 volts. All grounded conductors shall have continuous white THHN/THWN insulation, rated at 600 volts. All grounding conductors shall have continuous green THHN/THWN insulation, rated at 600 volts. The wire insulation color of 480 volt systems shall be black, white, and green. The wire insulation color of 240 volt systems shall utilize differing colors for the current-carrying conductors.

All splices are to be made at the light pole or in the pull box that may be directly in front of it. There shall be no other splices in the conductors at any other point within the system. All splices within pull boxes shall have linerless rubber splicing tape, vinyl electrical tape, and Scotchkote electrical coating applied to the joints. The Lighting District inspector has the authority to approve or deny the location(s) of any and all splices.

All pole riser wire shall be # 10 AWG, THHN/THWN stranded. No solid wire will be accepted. The riser wire color shall be black and white for 480 volt systems and black and red for 240 volt systems.

#### **SERVICE POINT DETAIL:**

A photograph and drawings of the service point is provided within this document. The detail depicts how the service pole and components within the cabinet should be laid out. This general layout should be followed for either 480 volt or 240 volt systems. The minimum size of the service entrance conductors shall be #2 A WG stranded. The minimum size wire connecting the main breaker to the contactor and/or the contactor to the secondary breaker(s) shall be #6 AWG stranded. The minimum size of any control wire shall be #14 AWG, THHN/THWN, stranded.

#### **LOAD CENTER CABINET ENCLOSURE:**

The load center cabinet shall be manufactured by Suncoast Metal Fabricators, located at 1030 South 86th Street, Tampa, Florida (telephone 813-630-2800). The cabinet shall be constructed of aluminum and contain a Corbin (C-2) lock. Cabinet dimensions are 15"W x 29"H x 12"D, part #SMF-2.

If the contractor chooses to buy all the components which make up the load center individually and assemble them on site, it is recommended that Charlotte County perform the assembly work. Charlotte County will assemble the supplied materials, wire, and test the back panel, and the contractor will install it into the cabinet.

#### **CONTACTOR:**

The contactor shall be an electrically held heating/lighting contactor, as manufactured by Siemens, part #LEN00E003120B. The contactor shall be 3-pole, rated for 100 amps, and utilize a 120 volt coil.

#### **CIRCUIT BREAKERS:**

The main circuit breaker shall be a 100 amp, 2-pole, 480 volt, molded case circuit breaker, as manufactured by Siemens, part #ED42B100.

Secondary breakers shall be rated for the appropriate amperes, 2-pole, 480 volt, molded case circuit breakers, as manufactured by Siemens, part #ED42B\_ \_ \_ (blank spaces indicate proper amperes required).

#### **STEP-DOWN TRANSFORMER:**

For systems designed to utilize 480 volts, the load center shall be equipped with a step-down transformer to operate the contactor coil and photocell circuit. The step-down transformer shall have a 480 volt input and a 120 volt output, with primary and secondary fusing, as manufactured by Square D, part #9070TF100D1. A step-down transformer is not needed in 240 volt systems.

**LIGHTNING ARRESTERS:**

The load center shall have a hard-wired secondary surge arrester wired to the load side of the main circuit breaker. The lightning arrester shall be rated at 600 volt, three-phase, four-wire, as manufactured by Delta, part #LA601, or Square D, part #SDSA3650.

Each light pole shall have a lightning arrester inside the pole hand hole. The lightning arrester shall be rated up to 600 volt, single phase, as manufactured by DITEK, part #DTK-DL480. The grounding conductor shall be attached to the pole and service ground by means of a solderless lug, sized appropriately.

**POLES AND LUMINAIRES:**

Whenever a lighting system is designed, the engineer of record shall use poles which place the fixture at a mounting height of 12', 16', or 22' above the finished elevation. Any deviations to the fixture mounting heights shall be approved by the Lighting District.

All decorative lighting systems shall utilize steel screw bases in lieu of concrete foundations. Steel screw bases used shall have a minimum safety factor of 2. Each base shall be manufactured to allow conduit entry thirty-six (36") below finish grade. Field modification to elongate the conduit slot will not be permitted. Each base shall be filled with soil to provide support for the installed conduits.

All decorative luminaire assemblies shall consist of "Bell shaped" Cyclone CY55 series luminaires; a nautical Cyclone M202 arm, modified as noted below; and a Nova #403 "Washington" decorative pole, mounting height as required. See drawings for dimensional details. The luminaire shall be furnished with a high power factor HPS ballast of the specified wattage and voltage and be UL/CSA labeled for "wet location" use. Ballast access shall be tool-free, by means of a hinged door. The optical assembly shall be IES type as required to meet the photometric design criteria, with a chemically brightened anodized aluminum reflector; shall be rated IP66 in imperviousness against dust and water; and shall be furnished with a flat tempered glass lens. The optical assembly shall be accessible without use of tools, by a multi-latch mechanism, with three symmetrical hinge/latch combinations at 120 degrees. The optical system shall include a mogul lamp socket for all HPS wattages specified.

The decorative arm shall be of the style and dimension shown on the drawings. Only one arm type shall be required for all three pole height options shown. Additionally, the arm shall be furnished with a strain relief hook at the top and a side access door to allow access to the strain relief hook. The arm shall be prewired with sufficient lead wire to extend 6" beyond the removable top bracket cap.

The decorative pole shall be by Nova Pole Industries, with a smooth, straight 5" extruded .250 wall shaft for the 12' MH pole and a smooth tapered 6"-5" extruded .250 wall shaft for taller poles. The pole shall be furnished with a #403 "Washington" style base. The pole shaft shall be structurally attached to the pole shaft. No clam-shell or slipover bases shall be allowed. Poles shall be designed to meet 140 mph wind load

criteria, as per AASHTO 2001. All decorative light poles shall utilize "Safety Base" breakaway light pole supports for frangibility, with a shroud for concealment of the supports. 16' and 22' poles shall be furnished with a "Stockbridge" style vibration damper. All poles shall heat tempered to T6 after welding.

All poles shall be finished in a textured TGIC polyester powder coat, meeting AAMA605-2 standards for color and gloss retention. The finish shall carry a published manufacturer's five year warranty addressing color and gloss retention. All design features of the specified products are included by reference herein, whether or not detailed in these specifications or the associated drawings. Pole finish color to be black textured RAL9005TX.

When a project proposes lighting areas with bollards, the bollard shall be manufactured by Cyclone Lighting, part #CBM1158H-LAP-RS5-50HPS-S17-QT/120-BB2-RAL9005TX colored black. All bollards shall utilize a 50 watt high pressure sodium, ED17 bulb, medium base. Bollard finish color to be black textured RAL9005TX (BKTX). See detail sheets for component specifications.

#### **DIRECTIONAL BORE AND DRIVEWAY CROSSING:**

All road crossings shall be accomplished by means of a directional bore. The contractor shall provide Charlotte County with directional bore log(s) taken at 10' intervals for all directional bores. Conduit for the purpose of roadway lighting that will be installed by means of a directional drill shall be 2" continuous HDPE, SDR13, colored gray pipe. The contractor shall provide the appropriate manufacturer fittings when switching from the continuous conduit to standard PVC. Examples of appropriate couplings are Etco brand E-Loc couplings, part #EL237, or Electroweld. Before the directional bore begins, the contractor shall expose all underground facilities. The contractor will be responsible for cleaning up the spoil and returning the site back to the original condition after the bore operation is complete. All drainage facilities shall be properly protected (i.e., hay bales, silt fence, etc.) from directional bore spoil. In the event that drainage facilities become filled with spoil as a result of the directional bore, it shall be the contractor's responsibility to have the material removed and the facility returned to its original condition.

The depth of any directionally-drilled conduit shall not exceed 10'. Charlotte County reserves the right to reject any conduit(s) placed greater than 10' deep. Should a depth greater than 10' be required, the contractor shall obtain approval from Charlotte County prior to performing the work.

#### **MISCELLANEOUS:**

The hand/off/auto functions of the load center shall be controlled by means of a control station, as manufactured by Square D, part number 9001KYK111.

The photo cell shall be a twist lock style, 120 volt, as manufactured by Intermatic, part #K4521.

Contained within each pole, there shall be weather-proof fuse holders. The weatherproof fuse holders shall be manufactured by Bussman, parts #HEB-AW-RYC and/or #HET-AW-RYC. The HET-AW-RYC fuse holder, if used, shall contain a permanently installed solid slug. No substitutes will be accepted.

Bussman FNQ-10 fuses shall be used at all pole locations.

## Noalox® Anti-Oxidant Compound

- Anti-oxidant and anti-seizing compound
- Reduces galling and seizing on aluminum conduit joints
- Suspended zinc particles penetrate and cut aluminum oxide
- Carrier material excludes air to prevent further oxidation
- Improves service life of aluminum electrical applications
- For use with all types of pressure-type wire connectors

Description	Cat. No.
1/2-oz. Tube	30-024
4-oz. Tube	30-026
8-oz. Squeeze Bottle	30-030
8-oz. Bottle with brush in cap	30-031
1-gal. Bucket	30-032
5- gal. Bucket	30-040
55-gal. Drum	30-1216

## Carlton® Rigid Nonmetallic Conduit, Fittings & Accessories

Carlton® manufactures the most complete line of nonmetallic conduits and fittings in the electrical industry. Carlton Schedule 40 and Schedule 80 conduits are designed for use aboveground and underground as described in the National Electrical Code. Specify only Carlton conduits and fittings to insure raceway system integrity.

### Features

**Ease of Installation** Nonmetallic conduits are 1/4 to 1/5 the weight of metallic systems, can be installed in less than half the time, and are easily fabricated on the job.

**Safety** Nonmetallic conduits are nonconductive, assuring a safe system.

**Impact Resistant** Carlton Schedule 40 and Schedule 80 nonmetallic conduits are resistant to sunlight and are listed for exposed or outdoor usage. The use of expansion fittings allows the system to expand and contract with temperature variations.

**Corrosion Resistant** Carlton conduits and fittings are nonmetallic and will not rust or corrode.

Carlton nonmetallic Schedule 40 and Schedule 80 conduits and elbows are manufactured to NEMA TC-2, Federal specification WC1094A and UL 651 specifications. Fittings are manufactured to NEMA TC-3, Federal specification WC1094A and UL514B. Both conduit and fittings carry respective UL or ETL Listings and UL or ETL labels.

### Carlton Schedule 40 Rigid PVC Nonmetallic Conduit (Heavy Wall EPC)

Listed for underground applications encased in concrete or direct burial. Also for use in exposed or concealed applications aboveground. • Sunlight resistant • Rated for use with 90°C conductors • Superior weathering characteristics

With Integral Bell\*

#### Schedule 40 Heavy Wall

Part No. 10'	20'	Nom. Size	Std. Crate Qty.		Wt. Per 100'	Dimensions		Wall
			10'	20'		O.D.	I.D.	
49005-010		1/2"	6000'		17	.840	.622	.109

Rigid nonmetallic conduit is normally supplied in standard 10' lengths, with one belled end per length. For specific requirements, it may be produced in lengths shorter or longer than 10', with or without belled ends.

Use Schedule 40 Fittings with  
Schedule 40 and Schedule 80 Conduit.

Notes: 1. Special fittings and conduit sizes will be quoted on request.  
2. DON'T FORGET TO ORDER CEMENT.  
3. Carlton reserves the right to ship to the nearest unitized quantity.

## DEEP BELLED SCHEDULE 40 AND 80 UL/CSA AND NON-UL/CSA PVC CONDUIT

In an effort meet customer demand we have changed all of PVC extrusion line belling equipment over to provide a deeper bell on all of UL Schedule 40, Schedule 80 and Non-UL Schedule 40 conduit. Over the next couple of weeks you will begin to see this product enter your marketplace as we deplete inventory of shorter belled product with that of the new deeper belled conduit.

**Below please find a chart that provides our new bell depths by conduit trade size.**

### **Schedule 40 & 80 (All UL/CSA and Non-UL/CSA, as well as all Canadian product)**

Trade Size	Carlton Part Number	Nominal Bell (Socket) Depth
1/2" (0.500")	49005 (UL Sch. 40), 49405 (UL Sch. 80), 59610 (Non-UL Sch. 40)	1.375"
3/4" (0.750")	49007 (UL Sch. 40), 49407 (UL Sch. 80)	1.500"
1" (1.000")	49008 (UL Sch. 40), 49408 (UL Sch. 80)	1.750"
1-1/4" (1.250")	49009 (UL Sch. 40), 49409 (UL Sch. 80)	1.875"
1-1/2" (1.500")	49010 (UL Sch. 40), 49410 (UL Sch. 80)	2.750"
2" (2.000")	49011 (UL Sch. 40), 49411 (UL Sch. 80), 59611 (Non-UL Sch. 40)	3.250"
2-1/2" (2.500")	49012 (UL Sch. 40), 49412 (UL Sch. 80), 59612 (Non-UL Sch. 40)	3.250"
3" (3.000")	49013 (UL Sch. 40), 49413 (UL Sch. 80), 59613 (Non-UL Sch. 40)	3.875"
3-1/2" (3.500")	49014 (UL Sch. 40)	3.875"
4" (4.000")	49015 (UL Sch. 40), 49415 (UL Sch. 80), 59615 (Non-UL Sch. 40)	4.625"
5" (5.000")	49016 (UL Sch. 40), 49416 (UL Sch. 80), 59616 (Non-UL Sch. 40)	5.625"
6" (6.000")	49017 (UL Sch. 40), 49417 (UL Sch. 80), 59617 (Non-UL Sch. 40)	6.375"

# Rigid Nonmetallic Conduit – Couplings

## Expansion Couplings

(For Use with Schedule 40 and Schedule 80)

E945 series expansion couplings are designed to compensate for length changes due to temperature variations in exposed conduit runs.

### Standard Expansion Couplings

(Expands to a maximum of 6")

Part No.	Size	Std. Ctn. Qty.	Lay Lengths	
			Stop to Stop Total Closed	Stop to Stop Total Open
E945D	1/2	50	12 1/4	18 5/8
E945E	3/4	50	12 1/4	18 5/8
E945F	1	45	12 3/4	19 1/8
E945G	1 1/4	30	12 3/4	19 1/8

## Couplings

### Standard Couplings

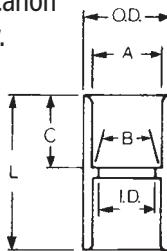

Except where noted by ►

All socket fittings should be attached Using Carlon solvent cement. Using Carlon fittings with Carlon nonmetallic conduit insures system integrity.

Socket type for joining nonmetallic conduit.

\*We recommend using Penn-Union Cual-Aid, an oxide inhibiting compound with these connectors. When connecting aluminum or ACSR wire, wire brush the conductor with Cual-Aid #11.

## BRONZE GROUND ROD CLAMPS • TYPES CAB & CEB

### HEAVY DUTY CLAMP

Made from corrosion resistant cast aluminum bronze. Furnished with silicon bronze hexagon head bolt. Socket head screws can be furnished by suffixing catalog number with "-S". For example: CAB-4-S.

Type CEB is an economical ground rod clamp made from corrosion resistant cast aluminum bronze. Furnished with silicon bronze hexagon head bolt.

### STANDARD CLAMP

## ALUMINUM SOLDERLESS LUGS • TYPE LA

One hole, front entrance copper or aluminum conductors 600 Volt Rated

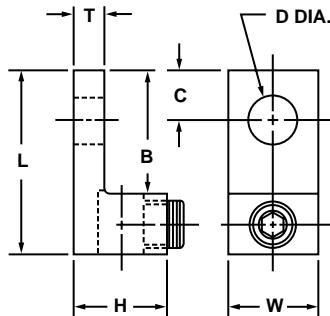

FIG. 2

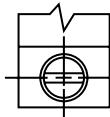

FIG. 1

Body, fabricated from high strength aluminum alloy extrusion.

Lug is 100% reusable using either screw driver or hex wrench.  
No special tools required.

Maximum conductivity, compact design light weight with ultimate strength.

Finish, electro-tin plated to assure minimum contact resistance and protection against corrosion when used with copper wire.  
(For added protection apply Penn-Union Cual-Aid® to cable before installation.)

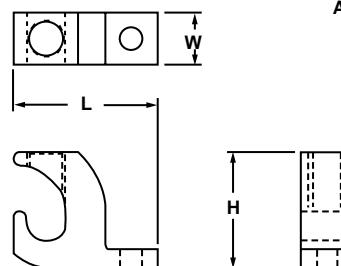

Standard stud hole sizes and locations are shown on chart.

## ALUMINUM LAY-IN LUGS • TYPE LI

One hole, side entrance copper or aluminum continuous conductors

Body, fabricated from high strength aluminum alloy extrusion.

Finish, electro-tin plated to assure minimum contact resistance and protection against corrosion when used with copper wire.  
(For added protection apply Penn-Union Corp. Cual-Aid® to cable before installation.)

The side entrance design permits the quick installation of one continuous conductor as a jumper to multiple locations without a break in the conductor. Excellent choice for use on grounding conductors.

# Lighting contactors

Siemens Lighting Contactors can be used individually for simple control schemes or as integral components in full-featured lighting control systems. They provide reliable and efficient means of local or remote switching of lighting as well as non-inductive loads. Rugged construction, heavy-duty ratings and a wide selection of control options and accessories makes the Siemens Lighting Contactors the right choice for lighting applications.

The Controls Express Lighting Contactor offering includes the following:

## Class LC

- Electrically held with contacts rated up to 30A at 600V
  - Open or in a NEMA 1 general purpose enclosure
- Power poles can easily be added at any time based on changing need
- Power poles can be field converted from NO to NC
- Device convertible to mechanically held with conversion kit

## Class LE

- Electrically held with contacts rated 20 - 400A at 600V
- Open or in a NEMA 1 general purpose enclosure
- Built-in auxiliary contacts for convenient 3-wire control

## Selection Guide

### Selecting the Transformer

Follow these steps to select the appropriate Type T or TF industrial control transformer and accessories:

1. Determine if you require the Type T or Type TF industrial control transformer (see "Product Descriptions" on page 3). Type TF units have factory-installed primary and secondary fuse blocks.
2. From Table 3 on page 5, determine the UL rating. If a CE marking is required, determine the multiple rating.
3. Choose the voltage code from Table 4, making sure the VA rating falls within the permissible range.
4. Create the catalog number by referring to the catalog ordering scheme below.

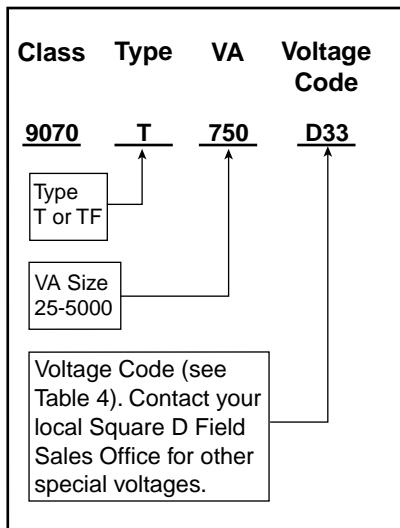

Figure 1: Catalog Number Example

Table 4: Type T and TF Transformer Selection

Application	Code	Primary Voltage	Secondary Voltage	Acc Code	Wiring Diagram	Type T Dim Table	Type TF Dim Table
	<b>D1</b>	240 x 480 230 x 460 220 x 440	120 115 110	I	2	17	23

FB-3A  
Field Installed  
Fuse Block

Primary fuse blocks offered by Square D, factory installed or field installed, have rejection clips requiring rejection style fuses. The primary side of the transformer also will require time delay fuses as a result of the inrush of the transformer during energizing. Rejection style fuses have an AIC rating of 200,000 A allowing end users to comply with UL 508 criteria or branch circuit status according to the NEC. The primary fuse blocks have a 30 A rating and accept 1-1/2 in. x 13/32 in. fuses. The 30 A rating limits the primary current to a maximum of 12 A when 250% sizing is used. Primary current is limited to a maximum of 24 A when 125% sizing is used. This is the limiting factor on our offering of primary fusing.

Square D offers multiple secondary fuse options. The first option is one combination fuse block with the primary fusing. This block is rated at 30 A and accepts 1-1/2 in. x 13/32 in. fuses; available factory installed or field installed. The second option is fuse clips installed on the terminals. Clips are also rated at 30 A and accept 1-1/2 in. x 13/32 in. fuses; available factory installed or field installed. This option is limited to single voltage secondary. The next two options are field installed options, accepting 1-1/4 in. x 1/4 in. fuses, with a 30 A rating.

The final option is also field installed and accepts 2 in. x 9/16 in. fuses, with a 30 A rating. Because all the secondary blocks have a 30 A rating, the secondary current is limited to 24 A, 125% maximum fuse size for secondary protection. This is the limiting factor on our offering of secondary fusing.

## SDSA3650 Series 001

### Secondary Surge Arrester

### Apartarrayos secundario

### SDSA3650 serie 001

### Supresseur de surtensions secondaires

### SDSA3650, série 001

Retain for future use. / Conservar para uso futuro. / À conserver pour usage ultérieur.

#### INTRODUCTION

The SDSA3650 Secondary Surge Arrester is designed and listed for indoor or outdoor installations and surge protection of three-phase grounded electrical services up to 600 Vac.

*NOTE: Do not use on ungrounded systems. Use on solidly grounded systems only.*

#### PRECAUTIONS

#### INTRODUCCIÓN

El apartarrayos secundario SDSA3650 ha sido diseñado y está registrado para ser instalado en interiores o en exteriores y proporcionar protección contra sobretensiones a acometidas eléctricas de tres fases, conectadas a tierra, de hasta 600 V~ (ca).

*NOTA: No lo utilice en sistemas no puestos a tierra. Utilícelo sólo en sistemas puestos directamente a tierra.*

#### PRECAUCIONES

#### INTRODUCTION

Le suppresseur de surtensions secondaires SDSA3650 est conçu et répertorié pour les installations intérieures et extérieures et pour la protection contre les surtensions de branchements électriques triphasés mis à la terre jusqu'à 600 Vca.

*REMARQUE : Ne pas utiliser sur des systèmes non mis à la terre. À utiliser uniquement dans un système avec mise à la terre directe.*

#### PRÉCAUTIONS

### ! DANGER / PELIGRO / DANGER

#### HAZARD OF ELECTRIC SHOCK, EXPLOSION, OR ARC FLASH

- Apply appropriate personal protective equipment (PPE) and follow safe electrical work practices. See NFPA 70E.
- This equipment must only be installed and serviced by qualified electrical personnel.
- Turn off all power supplying this equipment before working on or inside equipment.
- Always use a properly rated voltage sensing device to confirm power is off.
- Replace all devices, doors and covers before turning on power to this equipment.

**Failure to follow this instruction will result in death or serious injury.**

#### PELIGRO DE DESCARGA ELÉCTRICA, EXPLOSIÓN O DESTELLO POR ARQUEO

- Utilice equipo de protección personal (EPP) apropiado y siga las prácticas de seguridad eléctrica establecidas por su Compañía, consulte la norma 70E de NFPA.
- Solamente el personal eléctrico especializado deberá instalar y prestar servicio de mantenimiento a este equipo.
- Desenergice el equipo antes de realizar cualquier trabajo en él.
- Siempre utilice un dispositivo detector de tensión nominal adecuado para confirmar la desenergización del equipo.
- Vuelva a colocar todos los dispositivos, las puertas y las cubiertas antes de volver a energizar el equipo.

**El incumplimiento de esta instrucción podrá causar la muerte o lesiones serias.**

#### RISQUE D'ÉLECTROCUTION, D'EXPLOSION OU D'ÉCLAIR D'ARC

- Portez un équipement de protection personnelle (ÉPP) approprié et observez les méthodes de travail électrique sécuritaire. Voir NFPA 70E.
- Seul un personnel qualifié doit effectuer l'installation et l'entretien de cet appareil.
- Couper l'alimentation de l'appareil avant d'y travailler.
- Utilisez toujours un dispositif de détection de tension ayant une valeur nominale appropriée pour vous assurer que l'alimentation est coupée.
- Replacez tous les dispositifs, les portes et les couvercles avant de mettre l'appareil sous tension.

**Si cette directive n'est pas respectée, cela entraînera la mort ou des blessures graves.**

## DTK-DL480

### Physical Specifications

**Product Description:** 480V Single Phase Light Pole Arrester  
**Housing:** High Impact Plastic/Waterproof  
**Color:** Black  
**Size:** 6.12 in. x 2.75 in. x 2.1 in.  
**Weight:** 0.950

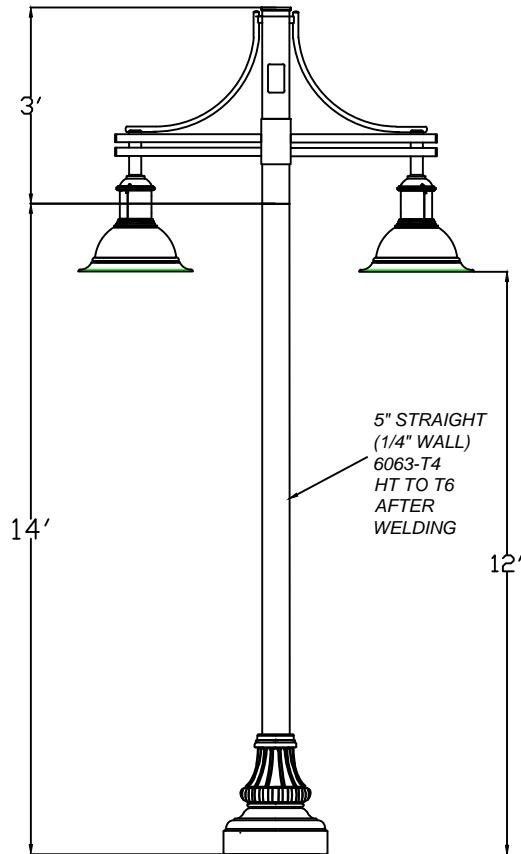

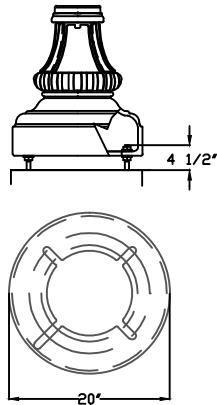

### Electrical Specifications

**Class:** Series Connected Light Pole Protection  
**Installation Point:** Pole Base  
**Connection Method:** Hardwire Series  
**Continuous Current:** 20A  
**Response Time:** <5nSec Installed  
**MCOV:** 550VAC  
**Operating Frequency:** 0 - 400 Hz  
**AC Protection Modes:** L - N, L - G, N - G  
**Service Voltage:** 440-480  
**Max Surge Current:** 25,000 Amps per Mode  
**Max Energy Dissipation:** 1240 Joules  
**Typical Let Through Voltage:** 1000V

Project : Charlotte County

:

Type: A Luminaire : CY55P1-FT1GC-IES-WATTS-HPS -VOLTS-RAL9005TX-CP3922

Page: 1/2

Qty:

**Luminaire components**

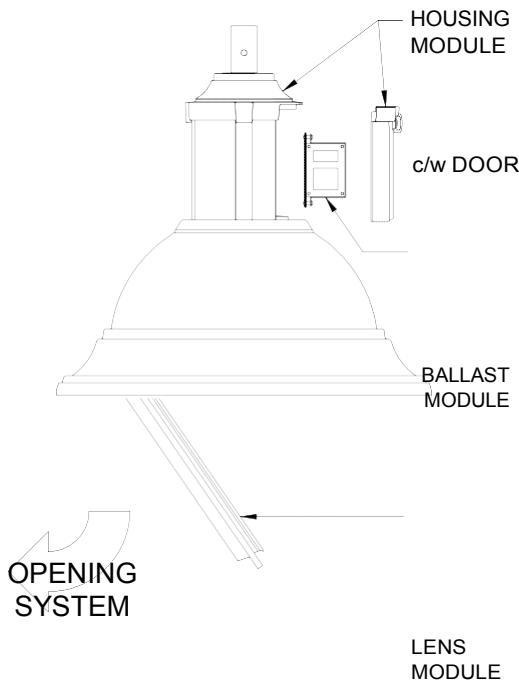

Housing module: Cast aluminum housing. Suspended on tenon and locked with locking bolt and set screws. Complete with removable access door and "street side" sticker. For bracket having a 2 3/8"(6cm)Ø tenon with 0.154"(4mm) of wall thickness.

Flat Lens Module (FT1GC): A clear tempered glass flat lens is assembled on a cast aluminum lens frame. This module is equipped with the tool free opening system which consists of three latches (TLS), easily accessible for a fast access to the inside components. This entire luminaire is IP66 certified, thanks to the one piece "V" shape injection molded weatherproof gasket, made of heat resistant silicone (287C, 550F)

**Optical/electrical components**

Lamp: (not included) XXX watts, mogul base.

(Note: HPS= High Pressure Sodium, MH = Metal Halide)

Optic: I.E.S. type xxx, vertical or horizontal lamp as required. The optic uses a multi-faceted reflector pre-anodized aluminum sheet (86% min. reflection), complete with a 4Kv porcelain lamp socket.

Ballast Module: A high power factor of 90%. Quad-tap ballast, tapped at xxx volts.

Minimum starting temperature: -40°F (-40°C) for HPS and -20°F (-30°C) for MH. The ballast/capacitor and starter are assembled on a single tool-free module, equiped with a "molex" quick-disconnect connector.

**Generals/Options**

Wiring/hardware: Type TEW 14-7. 3" (7cm) minimum exceeding from luminaire. All electrical connections between modules are made with quick-disconnect connectors. All exposed hardware is stainless steel. Silicone gasketing is applied.

Color: RAL9005TX (Jet black)/Finish:textured  or smooth  Application of a polyester powder coat of paint. (5 mils /127 microns). The finish meets the ASTM G7, B117 and D1654 requirements relative to salt spray and humidity resistance.. Cyclone recommends the textured finish for this product.

 EPA: 1.38 ft<sup>2</sup>    Weight: 33 Lbs / 15 Kg

Qty:

**Components**

Bracket: Round, central tubing 5"(13cm)Ø made of aluminum, with two (2) arm 2"x3" and 1" round decorative element, welded together. Furnished with hook located behind a removable door. Single configuration(C1). Slip fits on a pole tenon 12" long x 4 1/2" diameter..

Suspension system: Retain luminaire with one locking bolt.

**Generals/Options**

Hardware: All exposed hardware is stainless steel. EPDM and/or silicone gasketing is applied

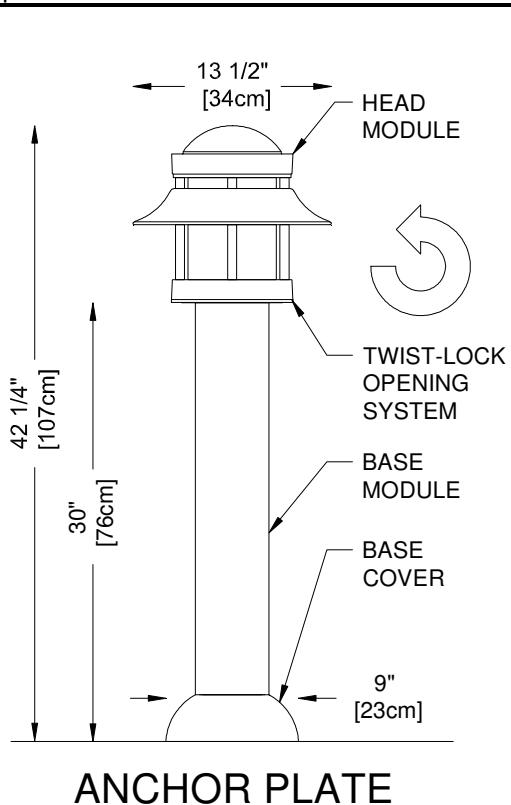

Color: RAL9005TX (Jet black)/Finish:textured  or smooth  Application of a polyester powder coat of paint. (5 mils/127 microns). The finish meets the ASTM G7, B117 and D1654 requirements relative to salt spray and humidity resistance. **Cyclone recommends the textured finish for this product.**

**Project : Charlotte County Bollard Standard**
**Order:SQ\_015195**
**Type: A**
**Bollard : CBM1158H-LAP-RS5-50HPS-S17-QT/120-BB2-RAL9005TX**
**Page: 1/2**
**Qty:1**

**Head module:** Round shape, cast aluminum hood tops a one-piece seamless clear acrylic (LAC) vessel (UV polymer resistant) with four (4) decorative arms. The head is mechanically assembled with an aluminum cast ring on the locking system and secured with one (1) Allen type vandal screw.

**Opening system:** A quarter-turn locking mechanism with constant pressure points allowing a tool-free access inside the bollard, to the lamp and ballast tray. Made with cast aluminum parts and sealed with a gasket compression system. The bollard offers an IP66 weatherproof protection. Secured with tamperproof screw.

**Base:** Round shape. Made from a 5"(13cm)Ø 6063-T6 aluminum tubing. Welded to both the top and the bottom of an anchor plate. Welded to both the top and the bottom of an anchor plate. **Base cover:** Round shape. A two-pieces cover made of cast aluminum, mechanically secured together.

**Bolt circle (BC):** 7" (18cm)Ø.

**Anchor bolts:** Supplied by Cyclone 3/8"Ø x12" (9"+3") long  
Partially galvanized anchor bolts c/w nuts & washers for levelling.

**Optical/electrical components**

**Lamp:** (not-included) 50 watts (HPS), ED17, medium base(S17), ANSI S68  
(Note : HPS=High Pressure Sodium, MH=Metal Halide)

**Optic:** I.E.S. type V (RS5), vertical lamp base down. The optic uses a multi-faceted reflector pre-anodized aluminum sheet (86% min. reflection), complete with a 4Kv porcelain lamp socket.

**Ballast module:** High reactance (HX) and high power factor of 90%. Primary voltage 120/208/240/277 volts, wired at 120 (QT/120) volts. 60 Hz. Assembled on a tool-free removable tray with quick-disconnect connectors. Minimum starting temperature: -40°F (-40°C) for HPS and -20°F (-30°C) for MH.

**Generals/Options**

**Wiring/hardware:** All electrical connections between modules are made with quick-disconnect connectors. All exposed hardware is stainless steel. Silicone gasketing are applied.

**Color:** RAL9005TX (Jet black) / **Finish:** textured  or smooth  . Application of a polyester powder coat of paint. (5 mils /127 microns). The finish meets the ASTM G7, B117 and D1654 requirements relative to salt spray and humidity resistance. **Cyclone recommends the textured finish for this product.**

Date : 18/09/2014 Page : 1/2

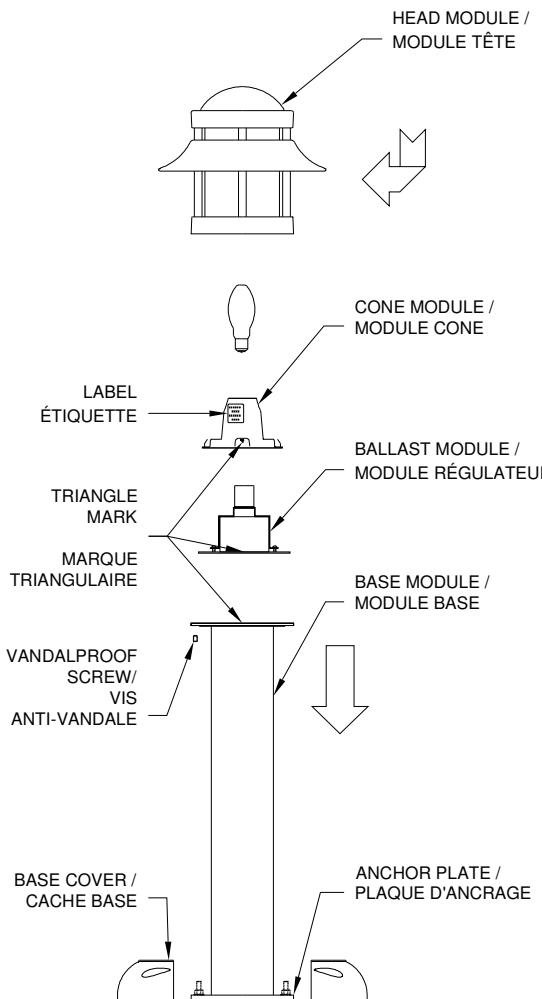

Designer : vlacampo

**Project : Charlotte County Bollard Standard**
**Order:SQ\_015195**
**Type: A      Bollard : CBM1158H- Instructions**
**Page: 2/2**
**Instructions - Turn off electrical power -**
**A) Luminaire installation :**

1. Install the anchor plate and connect the luminaire wires to the leads.
2. Put bollard on anchor plate and tighten screws on base.

**B) Lamp installation :**

1. Remove the vandal proof screw.
2. Remove the head module (1/4 turn system "counterclockwise").
3. Install lamp on base. (read label on cone module for proper model)
4. Put back the head module into position and screw it (quarter turn clock wise) until it lock. Put back the vandal proof screw.

**C) Ballast replacement :**

1. Remove the vandal proof screw.
2. Remove the head module (1/4 turn system "counterclockwise").
3. Remove the lamp and pull out the cone/ballast module after unlocking the 3 retaining latches.
4. Unplug the "Molex" connector.
5. Install the new cone/ballast module with the proper alignment.
6. Install lamp on base.
7. Put back the head module into position and screw it (quarter turn clock wise) until it lock. Put back the vandal proof screw.

**Instructions – METTRE HORS TENSION**
**A) Installation du luminaire :**

1. Installer la plaque d'ancrage et connecter les fils du bollard avec les fils d'alimentation.
2. Installer le bollard sur la plaque d'ancrage et serrer les vis de fixation.

**B) Installation de la lampe:**

1. Retirer la vis anti-vandale.
2. Dévisser et retirer le module tête du luminaire (Système « quart de tour »).
3. Installer la lampe sur la base.(Vérifier l'étiquette sur le cône pour le modèle)
4. Remettre le module tête en place et tourner un quart de tour (sens de l'horloge) jusqu'au blocage. Ré-installer la vis anti-vandale.

**C) Remplacement du régulateur:**

1. Retirer la vis anti-vandale.
2. Dévisser et retirer le module tête du luminaire (Système « quart de tour »).
3. Dévisser la lampe et retirer le module cône/régulateur après avoir débarré les trois patins de retenue.
4. Débrancher la fiche « Molex ».
5. Aligner et installer le nouveau module et le module cône.
6. Installer la lampe sur la base.
7. Remettre le module tête en place et tourner un quart de tour (sens de l'horloge) jusqu'au blocage. Ré-installer la vis anti-vandale.

## Couplings

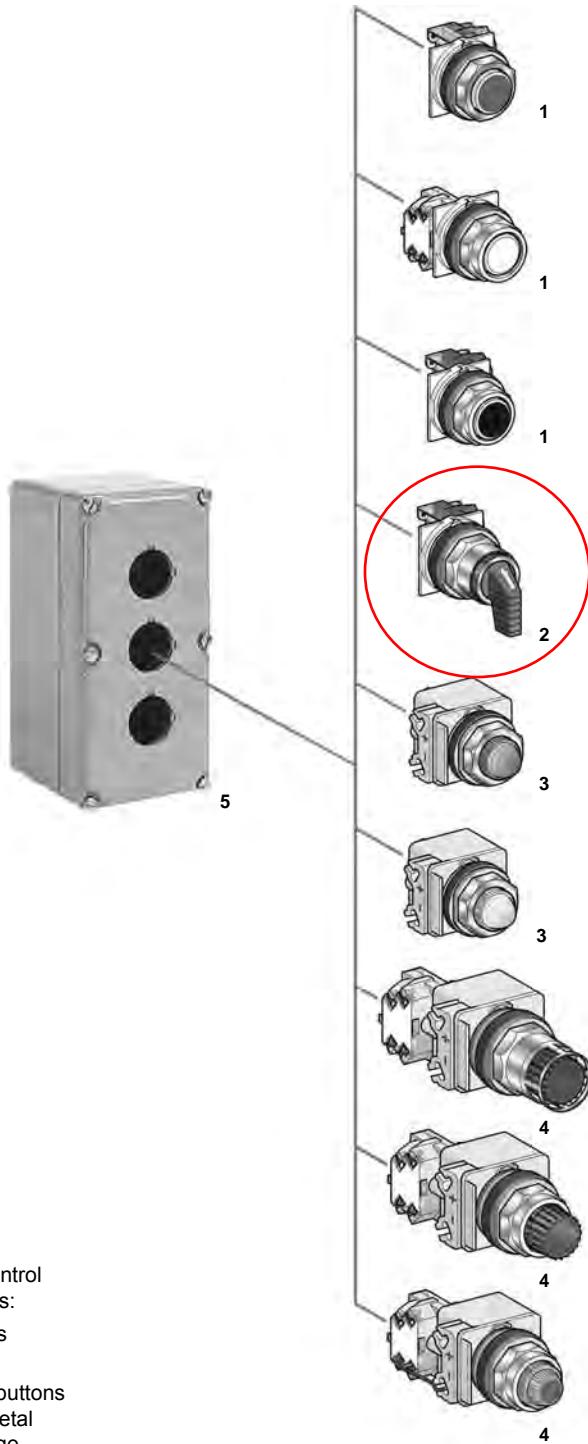

### Standard "E-Loc"®

Designed for use with smoothwall OD controlled innerduct (ASTM 3035), Sch. 40 and Sch. 80 innerduct, and is pressure tight to internal pressures above 200 psi when restrained or buried. Ideal for joining PE to PVC or threaded steel conduit.

## Components

9001KY and 9001SKY 30 mm control stations are available in two forms:

- Pre-assembled control stations
- Empty enclosures

These control stations use push buttons and pilot lights from the 9001K metal and 9001SK plastic operator range.

Control stations may include:

- 1 - Non-illuminated operators.
- 2 - Selector switches.
- 3 - Pilot lights.
- 4 - Illuminated operators.
- 5 - Enclosure.

# Harmony™ control stations and enclosures

## 9001KY/SKY 30 mm control stations

Note: When ordering, add prefix "9001" to the reference.

For breakaway holders See Page 2

HEB — For  $1\frac{3}{32}'' \times 1\frac{1}{2}''$  (midget) fuse. Fuseholder rated 30A, 600V Typical fuse types: BAF, FNM, FNQ, and KTK ( $\frac{1}{10}$ -30A).

### Ordering Information:

<b>HEB</b>	—	
	Load Terminal	Line Terminal

Also See Table on Page 3

### Example:

A single-pole, in-line holder for  $1\frac{3}{32}'' \times 1\frac{1}{2}''$  fuses. A single #12 solid copper wire is on the load side. A copper crimp is desired. Two #6 solid copper wire is on the line side. A copper set-screw is desired.

1. Choose HEB-Series.
2. Choose "A" for load side.
3. Choose "K" for line side.

**Complete Catalog Number:** HEB-AK.

For Insulating boots See Page 2 — Insulating boots are **not** included with **non-breakaway** parts and must be ordered separately. They come standard with the breakaway series.

When boots are utilized, extra heat retention requires that fuses are sized at a minimum of 200% of the RMS load current.

**Recommended Torque on Coupling Nut:** 10-20 in-lb.

# TRON® In-Line Fuseholders

## Single-Pole for $1\frac{3}{32}$ " x $1\frac{1}{2}$ " Fuses

**HEB  
Series**

### Breakaway Holders

Breakaway Holders consist of two parts for a complete unit. One part is the Fuseholder, which contains the Load Terminal, and the other part is the Breakaway, which contains the Line Terminal. These can be ordered as a complete unit or as individual parts.

### Catalog Symbols:

#### Breakaway Unit:

(Includes Fuseholder, Breakaway part and Insulating Boots)

#### Solid Breakaway

#### Insulating Boots

Catalog Numbers	Type
2A0660	Single Conductor
2A0661	Two Conductor

Two Insulating boots come standard with the Breakaway units (ex. HEB-AW-RLC-A). The insulating boots are **not** included with the **Non-Breakaway** Holders (ex. HEB-AA) or the individual pieces of the Breakaway parts (ex. HEB-AW, RLC-A). Two insulating boots must be ordered for each holder when ordering them separately. When insulated boots are utilized, extra heat retention requires that fuses are sized at a minimum of 200% of the RMS load current.

The only controlled copy of this Data Sheet is the electronic read-only version located on the Bussmann Network Drive. All other copies of this document are by definition uncontrolled. This bulletin is intended to clearly present comprehensive product data and provide technical information that will help the end user with design applications. Bussmann reserves the right, without notice, to change design or construction of any products and to discontinue or limit distribution of any products. # TRON® In-Line Fuseholders

## Single-Pole for Solid Neutral

**HET  
Series**

### Non-Breakaway Holders

Catalog Symbol: HET-AA, HET-AB, HET-BB, HET-JJ, and HET-JK

### In-Line Fuseholders, Single-Pole

#### Water-Resistant

For breakaway holders, see page 2

**HET** — A HEB fuseholder with a permanently installed solid neutral. Easily identified by white plastic coupling nut.

#### Example:

A single-pole, in-line holder for a neutral is required. One solid copper #8 is on the load side, copper crimp for connection. A solid copper #6 is on the line side, and a copper crimp is required.

1. Choose HET-series.
2. Choose "A" for load side.
3. Choose "B" for line side.

Complete Catalog Number: HET-AB.

#### Ordering Information:

### Catalog Data — Insulating Boots

Catalog Numbers	Type
2A0660	Single Conductor
2A0661	Two Conductor

Insulating boots are not included with non-breakaway parts and must be ordered separately. They come standard with the breakaway series. The HET-AW & HET-JW do not have the boots. These catalog items do not have a breakaway receptacle.

When boots are utilized, extra heat retention requires that fuses are sized at a minimum of 200% of the RMS load current.

**ALUMINUM CONSTRUCTION:** To order an aluminum meter socket rather than steel, change the catalog number prefix from -U to -UAP. This designates an aluminum, painted meter socket.

**HUBS:** For proper hub selection, see hub suffix chart on accessory page.

**CONNECTORS:** Extruded aluminum connectors are tin plated. For the U3296-X stud-type unit, order connector kits separately. Order 2 kits to cover both line and load side: K1539 (350 kcmil) or K1540 (600 kcmil.) See accessory page.

**BYPASS:** Lever supplies clamping action on meter spades and also operates bypass device.
