

CHARLOTTE COUNTY LAKE VIEW MIDWAY WATER QUALITY IMPROVEMENTS SEPTIC TANK LOCATION FORM & DRAWING

Dear Resident:

As part of the ongoing Charlotte County Water Quality Improvements, surveyors have been in the area collecting data along the roadways. We are in the very early phases of the design process and as part of the data collection, the location of the on-site septic systems is helpful.

We are asking your help in providing some on-lot information. The information that you provide may help minimize the disruption of your property, whenever future connection is made and help reduce the total cost.

During the design process we will try to place the best connection point location for each property based on the information provided; however, because of overall design considerations, we **cannot guarantee** that it will be placed at the exact location that you prefer.

On the other side of this letter is a short form to fill in and a drawing for you to use, to the best of your ability, showing the approximate location of your septic tank(s) and your *preferred location* for connecting to the County's future sewer system. If the location for your septic tank is *not known*, simply note on the drawing sketch.

Additionally, if you are currently using a potable water well for your drinking water supply, please indicate the location of the well on the drawing. If the location is not known, please note on the drawing sketch.

Please complete this form and return using the stamped, self-addressed envelope that has been enclosed for your convenience.

Thank you for your time and consideration.
